WEBVTT

NOTE duration:"00:20:56" NOTE recognizability:0.892

NOTE language:en-us

NOTE Confidence: 0.963981047142857

 $00:00:00.000 \longrightarrow 00:00:04.879$ OK. The time is now. Why wait?

NOTE Confidence: 0.963981047142857

 $00:00:04.880 \longrightarrow 00:00:06.280$ These are my disclosures.

NOTE Confidence: 0.964866538571428

00:00:09.160 --> 00:00:12.716 So let me ask you a question.

NOTE Confidence: 0.964866538571428

 $00:00:12.720 \longrightarrow 00:00:14.040$ Why are we all here today?

NOTE Confidence: 0.80521114

00:00:16.320 --> 00:00:18.960 Whether you're a scientist,

NOTE Confidence: 0.80521114

00:00:18.960 --> 00:00:22.596 a physician, a provider, a trainee,

NOTE Confidence: 0.80521114

 $00:00:22.600 \longrightarrow 00:00:24.964$ we're all here with one common

NOTE Confidence: 0.80521114

 $00:00:24.964 \longrightarrow 00:00:27.976$ goal and that is to help our

NOTE Confidence: 0.80521114

 $00:00:27.976 \longrightarrow 00:00:29.720$ patients lead healthier lives.

NOTE Confidence: 0.80521114

00:00:29.720 --> 00:00:32.120 And within the context of obesity,

NOTE Confidence: 0.80521114

 $00:00:32.120 \longrightarrow 00:00:34.240$ that's why we're here today.

NOTE Confidence: 0.80521114

 $00:00:34.240 \longrightarrow 00:00:36.760$ And let's think about the fact that

NOTE Confidence: 0.80521114

 $00:00:36.760 \longrightarrow 00:00:39.999$ if we can effectively treat obesity,

00:00:40.000 --> 00:00:43.606 we can treat, mitigate and potentially

NOTE Confidence: 0.80521114

 $00{:}00{:}43.606 \dashrightarrow 00{:}00{:}46.960$ prevent hundreds of other diseases.

NOTE Confidence: 0.80521114

 $00:00:46.960 \longrightarrow 00:00:49.570$ And so here we are in

NOTE Confidence: 0.80521114

 $00:00:49.570 \longrightarrow 00:00:50.875$ this transformative time,

NOTE Confidence: 0.80521114

 $00:00:50.880 \longrightarrow 00:00:53.502$ a time that is transformational because

NOTE Confidence: 0.80521114

 $00:00:53.502 \longrightarrow 00:00:56.900$ of the introduction of these new highly

NOTE Confidence: 0.80521114

 $00:00:56.900 \longrightarrow 00:00:58.996$ effective anti obesity medications.

NOTE Confidence: 0.80521114

 $00:00:59.000 \longrightarrow 00:01:01.536$ And I would argue that this is a

NOTE Confidence: 0.80521114

 $00{:}01{:}01.536 \dashrightarrow 00{:}01{:}04.070$ moment in medical history akin to

NOTE Confidence: 0.80521114

 $00:01:04.070 \longrightarrow 00:01:06.794$ discoveries such as the discovery of

NOTE Confidence: 0.80521114

 $00{:}01{:}06.870 \dashrightarrow 00{:}01{:}11.680$ in sulin or the discovery of penicillin.

NOTE Confidence: 0.80521114

00:01:11.680 --> 00:01:13.740 Honestly treating this one disease

NOTE Confidence: 0.80521114

 $00:01:13.740 \longrightarrow 00:01:16.526$ can change the face of medicine and

NOTE Confidence: 0.80521114

 $00:01:16.526 \longrightarrow 00:01:19.126$ all of you here in this room and

NOTE Confidence: 0.80521114

 $00:01:19.205 \longrightarrow 00:01:21.515$ online are part of that history.

NOTE Confidence: 0.80521114

 $00:01:21.520 \longrightarrow 00:01:24.000$ So to illustrate this transformation,

00:01:24.000 --> 00:01:26.079 I'm going to show you two patients,

NOTE Confidence: 0.80521114

 $00:01:26.080 \longrightarrow 00:01:29.314$ one treated with the older anti obesity

NOTE Confidence: 0.80521114

 $00:01:29.314 \longrightarrow 00:01:31.798$ medications and one with the new.

NOTE Confidence: 0.80521114

 $00:01:31.800 \longrightarrow 00:01:33.728$ So this is an 18 year old who

NOTE Confidence: 0.80521114

00:01:33.728 --> 00:01:35.317 I saw her BMI was 57.

NOTE Confidence: 0.80521114

 $00:01:35.320 \longrightarrow 00:01:37.900$ She already had obesity related diseases

NOTE Confidence: 0.80521114

00:01:37.900 --> 00:01:40.120 and had considered bariatric surgery

NOTE Confidence: 0.80521114

 $00:01:40.120 \longrightarrow 00:01:42.120$ but had encountered some barriers.

NOTE Confidence: 0.80521114

 $00{:}01{:}42.120 \dashrightarrow 00{:}01{:}44.520$ She came to me to see other options.

NOTE Confidence: 0.80521114

 $00:01:44.520 \longrightarrow 00:01:46.424$ So what did I do over the next

NOTE Confidence: 0.80521114

 $00:01:46.424 \longrightarrow 00:01:47.639$ three to four years?

NOTE Confidence: 0.80521114

 $00:01:47.640 \longrightarrow 00:01:50.178$ Well, I used four different medications

NOTE Confidence: 0.80521114

 $00{:}01{:}50.178 \dashrightarrow 00{:}01{:}52.720$ and her response was remarkable.

NOTE Confidence: 0.80521114

 $00:01:52.720 \longrightarrow 00:01:54.832$ She lost nearly 140 lbs over

NOTE Confidence: 0.80521114

 $00:01:54.832 \longrightarrow 00:01:56.760$ those three to four years,

 $00:01:56.760 \longrightarrow 00:01:58.960$ with her BMI decreasing to

NOTE Confidence: 0.80521114

 $00:01:58.960 \longrightarrow 00:02:01.160$ 31 and her A1C normalizing.

NOTE Confidence: 0.80521114

 $00:02:01.160 \longrightarrow 00:02:03.035$ And so with these previous

NOTE Confidence: 0.80521114

 $00:02:03.035 \longrightarrow 00:02:04.160$ medications for agents,

NOTE Confidence: 0.80521114

00:02:04.160 --> 00:02:05.840 45% total body weight loss.

NOTE Confidence: 0.80521114

 $00:02:05.840 \longrightarrow 00:02:07.268$ This was possible.

NOTE Confidence: 0.80521114

00:02:07.268 --> 00:02:10.600 Now let's look at our next patient,

NOTE Confidence: 0.80521114

 $00:02:10.600 \longrightarrow 00:02:12.826$ a 49 year old who came to

NOTE Confidence: 0.80521114

 $00:02:12.826 \longrightarrow 00:02:15.157$ see me when her BMI was 34.

NOTE Confidence: 0.80521114

00:02:15.160 --> 00:02:18.016 She had successfully lost weight multiple

NOTE Confidence: 0.80521114

00:02:18.016 --> 00:02:21.052 times in her life and had regained it,

NOTE Confidence: 0.80521114

00:02:21.052 --> 00:02:23.160 so losing weight was not the issue,

NOTE Confidence: 0.80521114

 $00:02:23.160 \longrightarrow 00:02:25.240$ It's maintaining that weight reduction.

NOTE Confidence: 0.80521114

 $00:02:25.240 \longrightarrow 00:02:28.194$ She also had some obesity related diseases.

NOTE Confidence: 0.80521114

 $00:02:28.200 \longrightarrow 00:02:29.760$ So what did she do?

NOTE Confidence: 0.80521114

 $00:02:29.760 \longrightarrow 00:02:30.166$ Well,

 $00{:}02{:}30.166 \dashrightarrow 00{:}02{:}33.008$ we enrolled her in our surmount one

NOTE Confidence: 0.80521114

 $00{:}02{:}33.008 \to 00{:}02{:}35.768$ trial with tirzepatide and this is what

NOTE Confidence: 0.80521114

00:02:35.768 --> 00:02:37.600 happened over the course of the year.

NOTE Confidence: 0.949531638

 $00:02:41.600 \longrightarrow 00:02:44.640$ She lost over 90 lbs,

NOTE Confidence: 0.949531638

00:02:44.640 --> 00:02:48.525 nearly £100 in the course of this

NOTE Confidence: 0.949531638

 $00:02:48.525 \longrightarrow 00:02:50.415$ trial and completely transformed

NOTE Confidence: 0.949531638

 $00:02:50.415 \longrightarrow 00:02:52.640$ her health and her life.

NOTE Confidence: 0.949531638

 $00{:}02{:}52.640 \dashrightarrow 00{:}02{:}54.612$ So next generation medications,

NOTE Confidence: 0.949531638

 $00:02:54.612 \longrightarrow 00:02:56.202$ one agent maybe 45%.

NOTE Confidence: 0.949531638

 $00:02:56.202 \dashrightarrow 00:02:58.309$ Of course she was a super responder

NOTE Confidence: 0.949531638

 $00:02:58.309 \longrightarrow 00:03:00.519$ but this is what we're talking about

NOTE Confidence: 0.949531638

 $00{:}03{:}00.519 \dashrightarrow 00{:}03{:}02.840$ when we talk about these new agents.

NOTE Confidence: 0.949531638

 $00{:}03{:}02.840 \dashrightarrow 00{:}03{:}05.038$ So we're clearly at this watershed brought

NOTE Confidence: 0.949531638

 $00:03:05.038 \longrightarrow 00:03:07.983$ on by the introduction of these highly

NOTE Confidence: 0.949531638

 $00:03:07.983 \longrightarrow 00:03:09.919$ effective anti obesity medications.

 $00:03:09.920 \longrightarrow 00:03:11.786$ The older medications it was possible

NOTE Confidence: 0.949531638

 $00{:}03{:}11.786 \dashrightarrow 00{:}03{:}13.812$ to achieve this type of obesity

NOTE Confidence: 0.949531638

 $00{:}03{:}13.812 \dashrightarrow 00{:}03{:}15.632$ treatment but now with Somagletite

NOTE Confidence: 0.949531638

 $00:03:15.632 \longrightarrow 00:03:17.089$ and Tirzepatite really bringing

NOTE Confidence: 0.949531638

 $00:03:17.089 \longrightarrow 00:03:18.919$ forward the development of all of

NOTE Confidence: 0.949531638

00:03:18.919 --> 00:03:20.544 these new anti obesity medications.

NOTE Confidence: 0.949531638

 $00{:}03{:}20.544 \dashrightarrow 00{:}03{:}23.008$ Now the ones that we're focusing in

NOTE Confidence: 0.949531638

 $00:03:23.008 \longrightarrow 00:03:25.446$ on right now are nutrient stimulated

NOTE Confidence: 0.949531638

 $00:03:25.446 \longrightarrow 00:03:27.471$ hormone based therapies or Nushes.

NOTE Confidence: 0.949531638

 $00:03:27.480 \longrightarrow 00:03:29.888$ But please know this is only one class

NOTE Confidence: 0.949531638

 $00{:}03{:}29.888 \dashrightarrow 00{:}03{:}31.800$ of medications for obesity treatment.

NOTE Confidence: 0.949531638

 $00:03:31.800 \longrightarrow 00:03:34.010$ There's active and receptor inhibitors

NOTE Confidence: 0.949531638

 $00:03:34.010 \longrightarrow 00:03:36.220$ that can potentially increase lean

NOTE Confidence: 0.949531638

 $00{:}03{:}36.282 \dashrightarrow 00{:}03{:}38.157$ mass while decreasing fat mass.

NOTE Confidence: 0.949531638

00:03:38.160 --> 00:03:39.972 There's an MC4 agonist for monogenic

NOTE Confidence: 0.949531638

 $00:03:39.972 \longrightarrow 00:03:41.618$ obesity and there are many

00:03:41.618 --> 00:03:43.158 other mechanisms being explored.

NOTE Confidence: 0.949531638

 $00:03:43.160 \longrightarrow 00:03:46.040$ So this is just one class.

NOTE Confidence: 0.949531638

 $00:03:46.040 \longrightarrow 00:03:47.318$ So in terms of these nutrients,

NOTE Confidence: 0.949531638

 $00:03:47.320 \longrightarrow 00:03:49.240$ stimulated hormones, what are they?

NOTE Confidence: 0.949531638 00:03:49.240 --> 00:03:49.555 Well, NOTE Confidence: 0.949531638

 $00:03:49.555 \longrightarrow 00:03:51.130$ they're hormones that are stimulated

NOTE Confidence: 0.949531638

 $00:03:51.130 \longrightarrow 00:03:53.246$ when we eat food and they signal

NOTE Confidence: 0.949531638

 $00{:}03{:}53.246 \rightarrow 00{:}03{:}55.115$ to various tissues in our body and

NOTE Confidence: 0.949531638

00:03:55.170 --> 00:03:57.040 our brain about energy homeostasis,

NOTE Confidence: 0.949531638

00:03:57.040 --> 00:03:59.164 about satiety and potentially

NOTE Confidence: 0.949531638

 $00:03:59.164 \longrightarrow 00:04:00.757$ about energy expenditure.

NOTE Confidence: 0.949531638 00:04:00.760 --> 00:04:00.989 Now, NOTE Confidence: 0.949531638

 $00:04:00.989 \longrightarrow 00:04:02.363$ the one that we're the most

NOTE Confidence: 0.949531638

 $00:04:02.363 \longrightarrow 00:04:03.479$ familiar with is GLP one,

NOTE Confidence: 0.949531638

 $00{:}04{:}03.480 \dashrightarrow 00{:}04{:}04{:}04.905$ because GLP one receptor agonists

 $00:04:04.905 \longrightarrow 00:04:06.713$ have been used for the treatment

NOTE Confidence: 0.949531638

 $00{:}04{:}06.713 \dashrightarrow 00{:}04{:}08.675$ of diabetes for nearly two decades.

NOTE Confidence: 0.949531638

 $00:04:08.680 \longrightarrow 00:04:10.600$ But there are so many others,

NOTE Confidence: 0.949531638

00:04:10.600 --> 00:04:11.480 *** Oxintomodulin,

NOTE Confidence: 0.949531638

00:04:11.480 --> 00:04:14.120 Amylin and right now what's being

NOTE Confidence: 0.949531638

00:04:14.120 --> 00:04:16.760 explored are dual and triple agonists.

NOTE Confidence: 0.949531638

 $00{:}04{:}16.760 \dashrightarrow 00{:}04{:}18.992$ But please know that there are

NOTE Confidence: 0.949531638

00:04:18.992 --> 00:04:20.840 monotherapies in development as well,

NOTE Confidence: 0.949531638

 $00{:}04{:}20.840 \dashrightarrow 00{:}04{:}23.198$ for example with PYY and Amylin.

NOTE Confidence: 0.949531638

 $00:04:23.200 \longrightarrow 00:04:24.838$ And this is just the beginning

NOTE Confidence: 0.949531638

 $00:04:24.838 \longrightarrow 00:04:26.680$ for this class of medications.

NOTE Confidence: 0.949531638

 $00:04:26.680 \longrightarrow 00:04:28.960$ So this is a slide that I update

NOTE Confidence: 0.949531638

 $00:04:28.960 \longrightarrow 00:04:30.663$ almost daily because of the

NOTE Confidence: 0.949531638

00:04:30.663 --> 00:04:32.438 frenetic pace of development of

NOTE Confidence: 0.949531638

 $00:04:32.438 \longrightarrow 00:04:34.798$ these new anti obesity medications.

NOTE Confidence: 0.949531638

00:04:34.800 --> 00:04:36.450 And I'm just highly highlighting

 $00:04:36.450 \longrightarrow 00:04:38.854$ for you here those in phase two

NOTE Confidence: 0.949531638

 $00{:}04{:}38.854 \dashrightarrow 00{:}04{:}40.896$ and three of development And so

NOTE Confidence: 0.949531638

 $00:04:40.896 \longrightarrow 00:04:42.864$ we have all these new medications

NOTE Confidence: 0.949531638

 $00:04:42.864 \longrightarrow 00:04:45.120$ we need to study them and that

NOTE Confidence: 0.949531638

 $00:04:45.120 \longrightarrow 00:04:46.720$ was the impetus for Huawei,

NOTE Confidence: 0.949531638

00:04:46.720 --> 00:04:48.450 the Yale Obesity Research Center

NOTE Confidence: 0.949531638

 $00:04:48.450 \longrightarrow 00:04:50.180$ really at its inception to

NOTE Confidence: 0.949531638

 $00:04:50.248 \longrightarrow 00:04:52.343$ focus on investigation of these

NOTE Confidence: 0.949531638

00:04:52.343 --> 00:04:53.600 anti obesity medications,

NOTE Confidence: 0.949531638

00:04:53.600 --> 00:04:55.340 looking at clinical obesity

NOTE Confidence: 0.949531638

 $00:04:55.340 \longrightarrow 00:04:57.080$ research in three areas.

NOTE Confidence: 0.949531638

00:04:57.080 --> 00:04:58.277 So clinical Physiology,

NOTE Confidence: 0.949531638

 $00:04:58.277 \longrightarrow 00:05:00.671$ So not just looking at whether

NOTE Confidence: 0.949531638

00:05:00.671 --> 00:05:03.039 or how these medications work,

NOTE Confidence: 0.949531638

 $00:05:03.040 \longrightarrow 00:05:05.782$ but also using the medications as

00:05:05.782 --> 00:05:09.184 probes to better understand obesity,

NOTE Confidence: 0.949531638

00:05:09.184 --> 00:05:09.920 pathophysiology,

NOTE Confidence: 0.949531638

 $00:05:09.920 \longrightarrow 00:05:12.080$ clinical trials to understand if these

NOTE Confidence: 0.949531638

 $00:05:12.080 \longrightarrow 00:05:14.717$ medications are safe and effective and if so,

NOTE Confidence: 0.949531638

 $00:05:14.720 \longrightarrow 00:05:15.312$ for whom.

NOTE Confidence: 0.949531638

00:05:15.312 --> 00:05:16.200 And of course,

NOTE Confidence: 0.949531638

00:05:16.200 --> 00:05:16.872 patient outcomes,

NOTE Confidence: 0.949531638

 $00{:}05{:}16.872 \dashrightarrow 00{:}05{:}19.224$ because we need to know how these

NOTE Confidence: 0.949531638

 $00{:}05{:}19.224 \dashrightarrow 00{:}05{:}20.838$ medications work in the real world.

NOTE Confidence: 0.949531638

 $00:05:20.840 \longrightarrow 00:05:21.560$ Now additionally,

NOTE Confidence: 0.949531638

 $00{:}05{:}21.560 \dashrightarrow 00{:}05{:}24.080$ there are 4 themes within Y Wait

NOTE Confidence: 0.949531638

 $00:05:24.080 \longrightarrow 00:05:25.864$ collaboration with translational and

NOTE Confidence: 0.949531638

00:05:25.864 --> 00:05:27.576 basic science, because of course,

NOTE Confidence: 0.949531638

 $00:05:27.576 \longrightarrow 00:05:29.208$ we'd have none of these medications

NOTE Confidence: 0.949531638

00:05:29.208 --> 00:05:31.197 if it wasn't for our basic colleagues,

NOTE Confidence: 0.949531638

00:05:31.200 --> 00:05:34.560 mentorship of investigators and physicians,

 $00:05:34.560 \longrightarrow 00:05:36.960$ scientists again, to take this forward,

NOTE Confidence: 0.949531638

 $00{:}05{:}36.960 \dashrightarrow 00{:}05{:}39.256$ This is going to take many generations

NOTE Confidence: 0.949531638

 $00:05:39.256 \longrightarrow 00:05:41.611$ to figure out education of academic

NOTE Confidence: 0.949531638

 $00:05:41.611 \longrightarrow 00:05:43.439$ leaders in obesity medicine,

NOTE Confidence: 0.949531638

 $00:05:43.440 \longrightarrow 00:05:45.070$ really educating in terms of

NOTE Confidence: 0.949531638

 $00:05:45.070 \longrightarrow 00:05:46.700$ the biology of obesity and

NOTE Confidence: 0.908545749333333

00:05:46.763 --> 00:05:48.838 understanding obesity is a disease.

NOTE Confidence: 0.908545749333333

 $00:05:48.840 \longrightarrow 00:05:50.598$ And then integration with clinical care,

NOTE Confidence: 0.908545749333333

 $00{:}05{:}50.600 \dashrightarrow 00{:}05{:}52.595$ which we're going to hear about today.

NOTE Confidence: 0.908545749333333

 $00:05:52.600 \longrightarrow 00:05:54.967$ And for all this we really need to build

NOTE Confidence: 0.908545749333333

 $00{:}05{:}54.967 {\:{\mbox{--}}\!>}\ 00{:}05{:}56.576$ community which is a really important

NOTE Confidence: 0.908545749333333

 $00:05:56.576 \longrightarrow 00:05:58.868$ facet for all of this and there's amazing

NOTE Confidence: 0.908545749333333

 $00{:}05{:}58.868 {\:\raisebox{--}{\text{--}}}{\:\raisebox{--}{\text{--}}}{\:\raisebox{--}{\text{--}}} 00{:}06{:}00.764$ research already ongoing at Yale and

NOTE Confidence: 0.908545749333333

 $00:06:00.764 \longrightarrow 00:06:03.198$ how do we help bring this together.

NOTE Confidence: 0.908545749333333

 $00:06:03.200 \longrightarrow 00:06:05.350$ So there's many researchers looking

 $00:06:05.350 \longrightarrow 00:06:07.500$ at obesity and obesity treatment

NOTE Confidence: 0.908545749333333

 $00{:}06{:}07.565 \dashrightarrow 00{:}06{:}08.639$ and Sonia Caprio,

NOTE Confidence: 0.908545749333333

00:06:08.640 --> 00:06:09.760 I'm going to highlight some,

NOTE Confidence: 0.908545749333333

 $00:06:09.760 \longrightarrow 00:06:11.440$ some several of them for you here.

NOTE Confidence: 0.908545749333333

00:06:11.440 --> 00:06:13.624 So Sonia Caprio has been leading the

NOTE Confidence: 0.908545749333333

00:06:13.624 --> 00:06:15.688 charge in terms of pediatric obesity

NOTE Confidence: 0.908545749333333

 $00:06:15.688 \longrightarrow 00:06:18.166$ research for decades now and now she's

NOTE Confidence: 0.908545749333333

00:06:18.233 --> 00:06:20.609 embarking on looking at some magnetite

NOTE Confidence: 0.908545749333333

 $00{:}06{:}20.609 \dashrightarrow 00{:}06{:}22.465$ specifically for youth with obesity

NOTE Confidence: 0.908545749333333

 $00:06:22.465 \longrightarrow 00:06:24.585$ and pre diabetes as well as type 2

NOTE Confidence: 0.908545749333333

 $00{:}06{:}24.585 \mathrel{--}{>} 00{:}06{:}26.612$ and Maffold and she just started

NOTE Confidence: 0.908545749333333

 $00:06:26.612 \longrightarrow 00:06:28.720$ enrolling this summer for this study.

NOTE Confidence: 0.908545749333333

 $00:06:28.720 \longrightarrow 00:06:31.036$ So we anxiously await those results.

NOTE Confidence: 0.908545749333333

 $00:06:31.040 \longrightarrow 00:06:33.075$ There are many other physician

NOTE Confidence: 0.908545749333333

 $00:06:33.075 \longrightarrow 00:06:35.110$ investigators in pediatric obesity and

NOTE Confidence: 0.908545749333333

 $00:06:35.177 \longrightarrow 00:06:37.599$ you'll hear from Michelle Van name today.

 $00:06:37.600 \longrightarrow 00:06:39.690$ What about bariatric surgery and

NOTE Confidence: 0.908545749333333

 $00:06:39.690 \longrightarrow 00:06:41.362$ using these medications before

NOTE Confidence: 0.908545749333333

 $00:06:41.362 \longrightarrow 00:06:43.232$ and after surgical interventions?

NOTE Confidence: 0.908545749333333

00:06:43.232 --> 00:06:44.840 Willpower at Yale,

NOTE Confidence: 0.908545749333333

00:06:44.840 --> 00:06:46.891 led by Carlos Grillo has been looking

NOTE Confidence: 0.908545749333333

 $00:06:46.891 \longrightarrow 00:06:49.047$ at binge eating and more recently

NOTE Confidence: 0.908545749333333

00:06:49.047 --> 00:06:50.663 looking at naltrexone bupropion

NOTE Confidence: 0.908545749333333

 $00{:}06{:}50.663 \dashrightarrow 00{:}06{:}52.736$ after bariatric surgery to look at

NOTE Confidence: 0.908545749333333

 $00:06:52.736 \longrightarrow 00:06:54.598$ whether it can impact loss of control

NOTE Confidence: 0.908545749333333

 $00{:}06{:}54.600 \dashrightarrow 00{:}06{:}56.916$ eating as well as weight regain.

NOTE Confidence: 0.908545749333333

00:06:56.920 --> 00:06:59.952 And it's great because the power at Yale

NOTE Confidence: 0.908545749333333

 $00{:}06{:}59.952 \dashrightarrow 00{:}07{:}02.076$ partners with clinician educators to

NOTE Confidence: 0.908545749333333

 $00{:}07{:}02.076 \dashrightarrow 00{:}07{:}05.079$ involve them in this type of research.

NOTE Confidence: 0.908545749333333

 $00:07:05.080 \longrightarrow 00:07:07.750$ The adolescent bariatric surgery program

NOTE Confidence: 0.908545749333333

 $00:07:07.750 \longrightarrow 00:07:10.420$ incredibly robust and now prospectively

 $00:07:10.492 \longrightarrow 00:07:12.952$ looking at mitigating weight regain with

NOTE Confidence: 0.908545749333333

 $00{:}07{:}12.952 \to 00{:}07{:}15.192$ somagletite in their young patients.

NOTE Confidence: 0.908545749333333

00:07:15.200 --> 00:07:17.300 And then John Morton partnering

NOTE Confidence: 0.908545749333333

00:07:17.300 --> 00:07:19.400 with the Yale Specialty Pharmacy,

NOTE Confidence: 0.908545749333333

 $00:07:19.400 \longrightarrow 00:07:22.555$ looking at implementing medication pathways

NOTE Confidence: 0.908545749333333

 $00:07:22.555 \longrightarrow 00:07:26.253$ before and after surgery at the Yale

NOTE Confidence: 0.908545749333333

 $00{:}07{:}26.253 \dashrightarrow 00{:}07{:}28.599$ Stress Center directed by Rigita Sinha,

NOTE Confidence: 0.908545749333333

 $00:07:28.600 \longrightarrow 00:07:30.532$ who I've just had the incredible pleasure

NOTE Confidence: 0.908545749333333

 $00:07:30.532 \longrightarrow 00:07:32.280$ of working with for so many years,

NOTE Confidence: 0.908545749333333

 $00:07:32.280 \longrightarrow 00:07:34.560$ first as a mentor, now as a collaborator.

NOTE Confidence: 0.908545749333333

 $00{:}07{:}34.560 \dashrightarrow 00{:}07{:}37.240$ We have an RO one looking at soma gletite,

NOTE Confidence: 0.908545749333333

00:07:37.240 --> 00:07:39.180 basically the impact of Somagletite

NOTE Confidence: 0.908545749333333

 $00:07:39.180 \longrightarrow 00:07:41.120$ on metabolic and stress responses,

NOTE Confidence: 0.908545749333333

 $00{:}07{:}41.120 \dashrightarrow 00{:}07{:}42.419$ predicting weight outcomes,

NOTE Confidence: 0.908545749333333

00:07:42.419 --> 00:07:44.139 looking at craving, hunger,

NOTE Confidence: 0.908545749333333

00:07:44.139 --> 00:07:46.234 food consumption and of course

 $00:07:46.234 \longrightarrow 00:07:48.799$ we're doing an observed eating task.

NOTE Confidence: 0.908545749333333

 $00:07:48.800 \longrightarrow 00:07:51.056$ And this type of study that is so

NOTE Confidence: 0.908545749333333

 $00:07:51.056 \longrightarrow 00:07:52.599$ involved really requires A-Team.

NOTE Confidence: 0.908545749333333

00:07:52.600 --> 00:07:54.118 And at the Yale Stress Center,

NOTE Confidence: 0.908545749333333

 $00:07:54.120 \longrightarrow 00:07:57.152$ we're doing this study as well as several

NOTE Confidence: 0.908545749333333

 $00:07:57.152 \longrightarrow 00:07:59.400$ others looking at obesity treatment.

NOTE Confidence: 0.908545749333333

 $00:07:59.400 \longrightarrow 00:08:01.128$ Now obesity is a neuro metabolic

NOTE Confidence: 0.908545749333333

 $00:08:01.128 \longrightarrow 00:08:02.686$ disease and this is actually

NOTE Confidence: 0.908545749333333

 $00:08:02.686 \longrightarrow 00:08:04.396$ where I started my research.

NOTE Confidence: 0.908545749333333

 $00{:}08{:}04.400 \dashrightarrow 00{:}08{:}06.128$ And now the question is how can we

NOTE Confidence: 0.908545749333333

 $00:08:06.128 \longrightarrow 00:08:07.942$ begin to look at this in terms of

NOTE Confidence: 0.908545749333333

 $00{:}08{:}07.942 \dashrightarrow 00{:}08{:}09.440$ the impact of these medications and

NOTE Confidence: 0.908545749333333

 $00:08:09.440 \longrightarrow 00:08:11.393$ how they are working in the brain?

NOTE Confidence: 0.908545749333333

 $00{:}08{:}11.400 \dashrightarrow 00{:}08{:}13.255$ There's some pilot studies and

NOTE Confidence: 0.908545749333333

00:08:13.255 --> 00:08:15.360 smaller studies, some of which we did,

00:08:15.360 --> 00:08:17.760 but there's an incredible powerhouse of

NOTE Confidence: 0.908545749333333

 $00{:}08{:}17.760 \dashrightarrow 00{:}08{:}20.355$ investigators at the Yale MRC and the

NOTE Confidence: 0.908545749333333

 $00:08:20.355 \longrightarrow 00:08:22.511$ Pet Center where we can really utilize

NOTE Confidence: 0.908545749333333

 $00:08:22.576 \longrightarrow 00:08:24.916$ these tools to better understand this.

NOTE Confidence: 0.908545749333333

 $00:08:24.920 \longrightarrow 00:08:26.240$ And you're going to hear from

NOTE Confidence: 0.908545749333333

 $00:08:26.240 \longrightarrow 00:08:27.400$ one of these investigators today,

NOTE Confidence: 0.908545749333333

 $00:08:27.400 \longrightarrow 00:08:29.920$ Murray Cirilli.

NOTE Confidence: 0.908545749333333

 $00:08:29.920 \longrightarrow 00:08:31.224$ Now what about cancer?

NOTE Confidence: 0.908545749333333

 $00:08:31.224 \longrightarrow 00:08:33.550$ So cancer is another area that we

NOTE Confidence: 0.908545749333333

 $00:08:33.550 \longrightarrow 00:08:35.699$ are fast moving into looking at the

NOTE Confidence: 0.908545749333333

 $00{:}08{:}35.699 \dashrightarrow 00{:}08{:}37.428$ primary and secondary prevention

NOTE Confidence: 0.908545749333333

 $00:08:37.428 \longrightarrow 00:08:39.520$ with anti obesity medications.

NOTE Confidence: 0.908545749333333

 $00:08:39.520 \longrightarrow 00:08:41.415$ There are thirteen types of

NOTE Confidence: 0.908545749333333

 $00:08:41.415 \longrightarrow 00:08:43.310$ obesity related cancers and one

NOTE Confidence: 0.908545749333333

 $00:08:43.382 \longrightarrow 00:08:45.118$ of them endometrial cancer,

NOTE Confidence: 0.908545749333333

 $00:08:45.120 \longrightarrow 00:08:47.340$ There's a seven fold increase if

 $00:08:47.340 \longrightarrow 00:08:49.116$ somebody has severe obesity.

NOTE Confidence: 0.8711443725

00:08:49.120 --> 00:08:51.160 And Claire Flannery has been looking

NOTE Confidence: 0.8711443725

 $00:08:51.160 \longrightarrow 00:08:53.428$ at this since fellowship when she

NOTE Confidence: 0.8711443725

 $00:08:53.428 \longrightarrow 00:08:55.413$ had a patient with endometrial

NOTE Confidence: 0.8711443725

 $00{:}08{:}55.413 \dashrightarrow 00{:}08{:}56.917$ hyperplasia who is very young.

NOTE Confidence: 0.8711443725

 $00:08:56.920 \longrightarrow 00:08:58.762$ And now she's moving forward with

NOTE Confidence: 0.8711443725

00:08:58.762 --> 00:09:00.470 her research looking at obesity

NOTE Confidence: 0.8711443725

 $00:09:00.470 \longrightarrow 00:09:02.170$ driven endometrial hyperplasia to

NOTE Confidence: 0.8711443725

 $00{:}09{:}02.170 \dashrightarrow 00{:}09{:}04.295$ potentially use these medications and

NOTE Confidence: 0.8711443725

 $00:09:04.354 \dashrightarrow 00:09:06.238$ look at outcomes in those patients.

NOTE Confidence: 0.8711443725

00:09:06.240 --> 00:09:09.457 She's partnering with Sonia Caprio with

NOTE Confidence: 0.8711443725

 $00:09:09.457 \longrightarrow 00:09:11.959$ the patients that Sonia so eloquently

NOTE Confidence: 0.8711443725

 $00:09:11.959 \longrightarrow 00:09:14.072$ or elegantly phenotyped when they

NOTE Confidence: 0.8711443725

 $00{:}09{:}14.072 \dashrightarrow 00{:}09{:}16.616$ were children looking at the Yale

NOTE Confidence: 0.8711443725

 $00:09:16.616 \longrightarrow 00:09:18.820$ longitudinal reproductive and obesity cohort.

 $00:09:18.820 \longrightarrow 00:09:20.155$ There are many,

NOTE Confidence: 0.8711443725

 $00:09:20.160 \longrightarrow 00:09:22.662$ many other avenues to take with

NOTE Confidence: 0.8711443725

 $00:09:22.662 \longrightarrow 00:09:24.432$ these obesity related cancers and

NOTE Confidence: 0.8711443725

 $00:09:24.432 \longrightarrow 00:09:26.840$ we look forward to that as well.

NOTE Confidence: 0.8711443725

 $00:09:26.840 \longrightarrow 00:09:28.370$ Now what about health outcomes

NOTE Confidence: 0.8711443725

 $00:09:28.370 \longrightarrow 00:09:29.594$ and anti obesity medication.

NOTE Confidence: 0.8711443725

 $00:09:29.600 \longrightarrow 00:09:31.525$ So you're going to hear an entire

NOTE Confidence: 0.8711443725

 $00:09:31.525 \longrightarrow 00:09:33.560$ talk about this from Harlan Krumholtz.

NOTE Confidence: 0.8711443725

 $00{:}09{:}33.560 --> 00{:}09{:}33.888 \ \mathrm{Today}.$

NOTE Confidence: 0.8711443725

 $00:09:33.888 \longrightarrow 00:09:35.856$ It's so important to look at

NOTE Confidence: 0.8711443725

 $00{:}09{:}35.856 \dashrightarrow 00{:}09{:}37.360$ different populations, for example,

NOTE Confidence: 0.8711443725

 $00:09:37.360 \longrightarrow 00:09:39.040$ outcomes in older individuals,

NOTE Confidence: 0.8711443725

 $00:09:39.040 \longrightarrow 00:09:41.248$ cardiovascular outcomes and beyond.

NOTE Confidence: 0.8711443725

00:09:41.248 --> 00:09:44.560 Now moving into the clinical space,

NOTE Confidence: 0.8711443725

00:09:44.560 --> 00:09:46.416 so you're going to hear a talk about

NOTE Confidence: 0.8711443725

 $00:09:46.416 \longrightarrow 00:09:48.078$ this not particular to obesity,

 $00:09:48.080 \longrightarrow 00:09:49.504$ but the overall system.

NOTE Confidence: 0.8711443725

 $00:09:49.504 \longrightarrow 00:09:52.057$ But how can we begin to engage

NOTE Confidence: 0.8711443725

00:09:52.057 --> 00:09:54.559 patients to be partners in studies

NOTE Confidence: 0.8711443725

 $00:09:54.559 \longrightarrow 00:09:56.732$ with us and invite them to,

NOTE Confidence: 0.8711443725

 $00:09:56.732 \longrightarrow 00:09:58.397$ to engage in our protocols.

NOTE Confidence: 0.8711443725

 $00:09:58.400 \longrightarrow 00:10:00.520$ This of course, will take all of us,

NOTE Confidence: 0.8711443725

 $00:10:00.520 \longrightarrow 00:10:01.400$ the whole team of us,

NOTE Confidence: 0.8711443725

 $00:10:01.400 \longrightarrow 00:10:01.798$ clinicians,

NOTE Confidence: 0.8711443725

 $00:10:01.798 \longrightarrow 00:10:02.196$ scientists,

NOTE Confidence: 0.8711443725

 $00:10:02.196 \longrightarrow 00:10:04.186$ everyone within our programs that

NOTE Confidence: 0.8711443725

 $00:10:04.186 \longrightarrow 00:10:06.380$ are existing such as the pediatric

NOTE Confidence: 0.8711443725

 $00{:}10{:}06.380 \dashrightarrow 00{:}10{:}07.945$ program and newer programs like

NOTE Confidence: 0.8711443725

 $00{:}10{:}07.945 \dashrightarrow 00{:}10{:}09.800$ the Center for Weight management.

NOTE Confidence: 0.8711443725

 $00:10:09.800 \longrightarrow 00:10:12.275$ I'd also like to highlight that at 8 Devine,

NOTE Confidence: 0.8711443725

 $00:10:12.280 \longrightarrow 00:10:14.904$ we do have research space and that is

00:10:14.904 --> 00:10:18.077 being led by Boo Boo Benini and Diana Rivera.

NOTE Confidence: 0.8711443725

00:10:18.080 --> 00:10:19.238 And and again,

NOTE Confidence: 0.8711443725

00:10:19.238 --> 00:10:21.168 there's so many other opportunities

NOTE Confidence: 0.8711443725

00:10:21.168 --> 00:10:22.959 within the clinical space.

NOTE Confidence: 0.8711443725

 $00:10:22.960 \longrightarrow 00:10:24.000$ And so here we are.

NOTE Confidence: 0.8711443725

00:10:24.000 --> 00:10:24.762 Why wait?

NOTE Confidence: 0.8711443725

 $00{:}10{:}24.762 \dashrightarrow 00{:}10{:}27.429$ These are our goals and now into

NOTE Confidence: 0.8711443725

00:10:27.429 --> 00:10:28.640 our workshop.

NOTE Confidence: 0.8711443725

 $00:10:28.640 \longrightarrow 00:10:30.832$ So we really intend today to take you

NOTE Confidence: 0.8711443725

00:10:30.832 --> 00:10:33.117 from the bench to bedside and beyond.

NOTE Confidence: 0.8711443725

 $00:10:33.120 \longrightarrow 00:10:34.840$ And so we should do this in order.

NOTE Confidence: 0.8711443725

00:10:34.840 --> 00:10:36.597 But since I'm standing here right now,

NOTE Confidence: 0.8711443725

 $00:10:36.600 \longrightarrow 00:10:38.959$ I'm going to address briefly some of

NOTE Confidence: 0.8711443725

 $00:10:38.959 \longrightarrow 00:10:40.999$ the clinical trials that we've done.

NOTE Confidence: 0.8711443725

 $00:10:41.000 \longrightarrow 00:10:42.848$ Then you're going to hear two

NOTE Confidence: 0.8711443725

 $00:10:42.848 \longrightarrow 00:10:44.856$ talks that focus on Physiology,

 $00:10:44.856 \longrightarrow 00:10:46.976$ basic Physiology of obesity and

NOTE Confidence: 0.8711443725

 $00:10:46.976 \longrightarrow 00:10:49.520$ then two clinical Physiology talks.

NOTE Confidence: 0.8711443725

 $00:10:49.520 \longrightarrow 00:10:51.644$ Then you'll hear a talk about

NOTE Confidence: 0.8711443725

 $00{:}10{:}51.644 \dashrightarrow 00{:}10{:}53.572$ patient outcomes or health outcomes

NOTE Confidence: 0.8711443725

 $00{:}10{:}53.572 \dashrightarrow 00{:}10{:}55.787$ and then integration with clinical

NOTE Confidence: 0.8711443725

00:10:55.787 --> 00:10:57.559 care from Doctor McGovern.

NOTE Confidence: 0.8711443725 00:10:57.560 --> 00:10:57.855 OK. NOTE Confidence: 0.8711443725

 $00:10:57.855 \longrightarrow 00:10:59.330$ So let's start with clinical

NOTE Confidence: 0.8711443725

 $00:10:59.330 \longrightarrow 00:11:01.368$ trials and I'm going to start this

NOTE Confidence: 0.8711443725

00:11:01.368 --> 00:11:03.237 section by giving a big thank you,

NOTE Confidence: 0.8711443725

 $00:11:03.240 \longrightarrow 00:11:05.025$ a huge thank you to YCCI because

NOTE Confidence: 0.8711443725

00:11:05.025 --> 00:11:06.758 all of our clinical trials have

NOTE Confidence: 0.8711443725

00:11:06.758 --> 00:11:08.872 been done at the CSRU with the

NOTE Confidence: 0.8711443725

 $00{:}11{:}08.938 \dashrightarrow 00{:}11{:}10.688$ staff who's sitting right here

NOTE Confidence: 0.8711443725

 $00:11:10.688 \longrightarrow 00:11:12.845$ supporting us through all of these

00:11:12.845 --> 00:11:15.275 trials and especially Margo and Kim,

NOTE Confidence: 0.8711443725

 $00:11:15.280 \longrightarrow 00:11:16.640$ who are the research coordinators

NOTE Confidence: 0.8711443725

00:11:16.640 --> 00:11:18.319 that I work with that truly

NOTE Confidence: 0.8711443725

 $00:11:18.319 \longrightarrow 00:11:19.639$ make all of this possible.

NOTE Confidence: 0.8711443725

 $00:11:19.640 \longrightarrow 00:11:20.760$ So thank you so much.

NOTE Confidence: 0.8711443725

 $00:11:20.760 \longrightarrow 00:11:22.450$ We really look forward to

NOTE Confidence: 0.8711443725

 $00:11:22.450 \longrightarrow 00:11:24.522$ engaging with you and why wait

NOTE Confidence: 0.8711443725

 $00:11:24.522 \longrightarrow 00:11:26.394$ in in future trials as well.

NOTE Confidence: 0.8711443725

 $00:11:26.400 \longrightarrow 00:11:28.992$ So here we are in terms of these medications,

NOTE Confidence: 0.8711443725

 $00:11:29.000 \longrightarrow 00:11:31.070$ let me highlight a few of them and where

NOTE Confidence: 0.8711443725

 $00:11:31.070 \longrightarrow 00:11:33.385$ we are and how we have participated in

NOTE Confidence: 0.8711443725

 $00:11:33.385 \longrightarrow 00:11:35.280$ the development of these medications.

NOTE Confidence: 0.8711443725

 $00:11:35.280 \longrightarrow 00:11:37.395$ So Samaglatide was FDA approved

NOTE Confidence: 0.8711443725

 $00:11:37.395 \longrightarrow 00:11:39.892$ initially for diabetes and then for

NOTE Confidence: 0.8711443725

 $00:11:39.892 \longrightarrow 00:11:42.165$ obesity in 2021 and it was really

NOTE Confidence: 0.8711443725

 $00:11:42.165 \longrightarrow 00:11:43.810$ the first agent that demonstrated

 $00:11:43.874 \longrightarrow 00:11:45.638$ double digit weight reduction.

NOTE Confidence: 0.947948543571429

00:11:45.640 --> 00:11:48.160 Now we were part of the select

NOTE Confidence: 0.947948543571429

 $00:11:48.160 \longrightarrow 00:11:49.644$ cardiovascular outcomes trial which

NOTE Confidence: 0.947948543571429

 $00:11:49.644 \longrightarrow 00:11:51.996$ was the first trial that really looked

NOTE Confidence: 0.947948543571429

00:11:51.996 --> 00:11:54.143 at patients with obesity without type

NOTE Confidence: 0.947948543571429

 $00:11:54.143 \longrightarrow 00:11:56.090$ 2 diabetes over 17,000 participants

NOTE Confidence: 0.947948543571429

 $00:11:56.090 \longrightarrow 00:11:58.760$ and what was demonstrated was a

NOTE Confidence: 0.947948543571429

 $00:11:58.760 \longrightarrow 00:12:01.160$ 20% reduction in three-point Mace.

NOTE Confidence: 0.947948543571429

 $00:12:01.160 \longrightarrow 00:12:03.098$ So we've been waiting to see

NOTE Confidence: 0.947948543571429

 $00:12:03.098 \longrightarrow 00:12:04.843$ does treating obesity with these

NOTE Confidence: 0.947948543571429

 $00:12:04.843 \longrightarrow 00:12:06.415$ medications improve health outcomes

NOTE Confidence: 0.947948543571429

 $00:12:06.415 \longrightarrow 00:12:08.680$ and the answer is clearly yes.

NOTE Confidence: 0.947948543571429

 $00:12:08.680 \longrightarrow 00:12:10.480$ And now we're seeing these outcomes with HEF,

NOTE Confidence: 0.947948543571429

 $00{:}12{:}10.480 \dashrightarrow 00{:}12{:}12.315$ PEF just released yesterday evidence

NOTE Confidence: 0.947948543571429

 $00:12:12.315 \longrightarrow 00:12:14.720$ of in terms of kidney benefit.

00:12:14.720 --> 00:12:18.140 So this is all coming full force Now

NOTE Confidence: 0.947948543571429

 $00:12:18.140 \longrightarrow 00:12:20.520$ we're also part of the step young

NOTE Confidence: 0.947948543571429

00:12:20.520 --> 00:12:22.972 trial looking at children aged 6 and

NOTE Confidence: 0.947948543571429

 $00:12:22.972 \longrightarrow 00:12:25.330$ above for treatment with somagotite now

NOTE Confidence: 0.947948543571429

 $00:12:25.400 \longrightarrow 00:12:27.794$ before you think well six years old,

NOTE Confidence: 0.947948543571429

00:12:27.800 --> 00:12:30.352 six years old and weighing 160

NOTE Confidence: 0.947948543571429

 $00:12:30.352 \longrightarrow 00:12:32.400$ lbs or 70 kilograms.

NOTE Confidence: 0.947948543571429

 $00:12:32.400 \longrightarrow 00:12:35.325$ So this is severe obesity and we have to

NOTE Confidence: 0.947948543571429

 $00:12:35.325 \longrightarrow 00:12:37.957$ develop options for these young patients.

NOTE Confidence: 0.947948543571429

 $00:12:37.960 \longrightarrow 00:12:39.640$ And so we look forward to that trial.

NOTE Confidence: 0.947948543571429

 $00:12:39.640 \longrightarrow 00:12:41.728$ We're almost fully enrolled at our

NOTE Confidence: 0.947948543571429

00:12:41.728 --> 00:12:43.880 site now In terms of tirzepatide,

NOTE Confidence: 0.947948543571429

 $00:12:43.880 \longrightarrow 00:12:45.830$ this was originally FDA approved

NOTE Confidence: 0.947948543571429

 $00:12:45.830 \longrightarrow 00:12:48.239$ for diabetes and then FDA approved

NOTE Confidence: 0.947948543571429

 $00:12:48.239 \longrightarrow 00:12:50.815$ for obesity in 2023 and we were so

NOTE Confidence: 0.947948543571429

 $00{:}12{:}50.815 \dashrightarrow 00{:}12{:}53.440$ honored to be a part of that process.

 $00:12:53.440 \longrightarrow 00:12:56.968$ So I was the lead Pi on the surmount

NOTE Confidence: 0.947948543571429

 $00:12:56.968 \longrightarrow 00:12:59.319$ 1 tirzepatide trial.

NOTE Confidence: 0.947948543571429

00:12:59.320 --> 00:13:00.472 And in this trial,

NOTE Confidence: 0.947948543571429

 $00:13:00.472 \longrightarrow 00:13:01.912$ we demonstrated that with the

NOTE Confidence: 0.947948543571429

00:13:01.912 --> 00:13:03.280 highest dose of tirzepatide,

NOTE Confidence: 0.947948543571429

 $00:13:03.280 \longrightarrow 00:13:05.960$ participants on average lost

NOTE Confidence: 0.947948543571429

 $00:13:05.960 \longrightarrow 00:13:07.160$ 22.5% of their body weight,

NOTE Confidence: 0.947948543571429

 $00{:}13{:}07.160 \dashrightarrow 00{:}13{:}10.457$ which translated to 52 lbs in just

NOTE Confidence: 0.947948543571429

 $00:13:10.457 \longrightarrow 00:13:12.990$ 72 weeks and 40% of individuals

NOTE Confidence: 0.947948543571429

 $00:13:12.990 \longrightarrow 00:13:15.475$ lost over 1/4 of their body weight.

NOTE Confidence: 0.947948543571429

 $00:13:15.480 \longrightarrow 00:13:17.358$ So this is really, truly amazing.

NOTE Confidence: 0.947948543571429

 $00:13:17.360 \longrightarrow 00:13:19.400$ We're moving forward with additional studies.

NOTE Confidence: 0.947948543571429

 $00:13:19.400 \dashrightarrow 00:13:23.306$ Now a cohort here about 40% had pre diabetes.

NOTE Confidence: 0.947948543571429

 $00:13:23.306 \longrightarrow 00:13:25.358$ So look out for those outcomes

NOTE Confidence: 0.947948543571429

 $00:13:25.360 \longrightarrow 00:13:26.800$ in the months to come.

 $00:13:26.800 \longrightarrow 00:13:28.580$ And and we're also moving

NOTE Confidence: 0.947948543571429

 $00:13:28.580 \longrightarrow 00:13:30.360$ forward with the surmount MMO,

NOTE Confidence: 0.947948543571429

 $00:13:30.360 \longrightarrow 00:13:32.550$ the cardiovascular outcomes trial and I'm

NOTE Confidence: 0.947948543571429

 $00:13:32.550 \longrightarrow 00:13:35.000$ on the steering committee for that as well.

NOTE Confidence: 0.947948543571429

00:13:35.000 --> 00:13:37.600 Now what about CAGRI SEMA,

NOTE Confidence: 0.947948543571429

00:13:37.600 --> 00:13:41.068 So this is an Amylin analog with a GL,

NOTE Confidence: 0.947948543571429

 $00:13:41.068 \longrightarrow 00:13:43.153$ P1 receptor agonist also showing

NOTE Confidence: 0.947948543571429

00:13:43.153 --> 00:13:44.800 impressive weight reduction.

NOTE Confidence: 0.947948543571429

 $00:13:44.800 \longrightarrow 00:13:48.424$ And I'm on the steering committee for this

NOTE Confidence: 0.947948543571429

 $00:13:48.424 \longrightarrow 00:13:50.359$ cardiovascular outcomes trial as well.

NOTE Confidence: 0.947948543571429

 $00:13:50.360 \longrightarrow 00:13:52.460$ What about Glucagon GLP,

NOTE Confidence: 0.947948543571429

 $00:13:52.460 \longrightarrow 00:13:54.035$ one receptor agonist?

NOTE Confidence: 0.947948543571429

 $00:13:54.040 \longrightarrow 00:13:55.680$ So there's several in development.

NOTE Confidence: 0.947948543571429

 $00:13:55.680 \longrightarrow 00:13:58.718$ The one that's farthest along is cerutatide.

NOTE Confidence: 0.947948543571429 00:13:58.720 --> 00:13:59.180 Again, NOTE Confidence: 0.947948543571429

 $00:13:59.180 \longrightarrow 00:14:01.020$ impressive weight reduction results

00:14:01.020 --> 00:14:04.067 with this agent and we're also part

NOTE Confidence: 0.947948543571429

 $00:14:04.067 \longrightarrow 00:14:07.845$ of this phase three trial here now.

NOTE Confidence: 0.947948543571429

 $00:14:07.845 \longrightarrow 00:14:10.400$ Next we have a triple hormone receptor

NOTE Confidence: 0.947948543571429

00:14:10.400 --> 00:14:13.552 agonist and I'm going to spend a few

NOTE Confidence: 0.947948543571429

 $00:14:13.552 \longrightarrow 00:14:15.120$ slides speaking about retitrutide.

NOTE Confidence: 0.947948543571429

 $00:14:15.120 \longrightarrow 00:14:18.279$ So I was also the lead Pi on this

NOTE Confidence: 0.947948543571429

00:14:18.279 --> 00:14:21.000 trial and retitrutide is a GIPGL

NOTE Confidence: 0.947948543571429

 $00{:}14{:}21.000 \dashrightarrow 00{:}14{:}22.920$ P1 Glucagon receptor agonist.

NOTE Confidence: 0.947948543571429

 $00:14:22.920 \longrightarrow 00:14:24.960$ And we were incredibly impressed

NOTE Confidence: 0.947948543571429

 $00{:}14{:}24.960 \dashrightarrow 00{:}14{:}27.515$ to see that the weight reduction

NOTE Confidence: 0.947948543571429

 $00:14:27.515 \longrightarrow 00:14:30.455$ with this agent was 24.2% at just

NOTE Confidence: 0.947948543571429

 $00{:}14{:}30.455 \dashrightarrow 00{:}14{:}32.480$ eleven months and that translated

NOTE Confidence: 0.947948543571429

 $00{:}14{:}32.480 {\:{\circ}{\circ}{\circ}}>00{:}14{:}34.921$ to an average weight reduction

NOTE Confidence: 0.947948543571429

 $00:14:34.921 \longrightarrow 00:14:37.516$ of £58 in the short time frame.

NOTE Confidence: 0.947948543571429

 $00:14:37.520 \longrightarrow 00:14:39.632$ And Please note that all the

00:14:39.632 --> 00:14:41.040 participants were still actively

NOTE Confidence: 0.947948543571429

 $00:14:41.104 \longrightarrow 00:14:43.204$ losing weight at the time that the

NOTE Confidence: 0.947948543571429

 $00:14:43.204 \longrightarrow 00:14:44.920$ trial product was discontinued.

NOTE Confidence: 0.947948543571429

 $00:14:44.920 \longrightarrow 00:14:46.720$ So this will have to wait for the

NOTE Confidence: 0.947948543571429

 $00:14:46.720 \longrightarrow 00:14:48.476$ phase three to see the full efficacy,

NOTE Confidence: 0.947948543571429

 $00:14:48.480 \longrightarrow 00:14:51.154$ but eleven months this was very impressive.

NOTE Confidence: 0.947948543571429

00:14:51.160 --> 00:14:52.960 Now with this agent and with

NOTE Confidence: 0.947948543571429

 $00:14:52.960 \longrightarrow 00:14:54.160$ all agents we look

NOTE Confidence: 0.92529825375

 $00:14:54.226 \longrightarrow 00:14:56.488$ at the threshold that the

NOTE Confidence: 0.92529825375

00:14:56.488 --> 00:14:57.996 percentage of people reaching

NOTE Confidence: 0.92529825375

 $00{:}14{:}58.060 \dashrightarrow 00{:}15{:}00.040$ the weight reduction threshold.

NOTE Confidence: 0.92529825375

 $00:15:00.040 \longrightarrow 00:15:02.790$ So we often use 5% as that threshold

NOTE Confidence: 0.92529825375

 $00:15:02.790 \longrightarrow 00:15:04.770$ because the FDA uses this in

NOTE Confidence: 0.92529825375

00:15:04.770 --> 00:15:07.188 terms of its decision making of

NOTE Confidence: 0.92529825375

 $00:15:07.188 \longrightarrow 00:15:08.800$ approval for these medications.

NOTE Confidence: 0.92529825375

 $00:15:08.800 \longrightarrow 00:15:10.344$ And so with redditruitide,

00:15:10.344 --> 00:15:12.274 this triple hormone receptor agonist,

NOTE Confidence: 0.92529825375

00:15:12.280 --> 00:15:15.744 what we saw was that 100% of

NOTE Confidence: 0.92529825375

 $00:15:15.744 \longrightarrow 00:15:17.872$ individuals taking this medication

NOTE Confidence: 0.92529825375

 $00:15:17.872 \longrightarrow 00:15:21.232$ lost at least 5% of their body weight.

NOTE Confidence: 0.92529825375

00:15:21.232 --> 00:15:23.426 I don't think I'll probably ever be

NOTE Confidence: 0.92529825375

 $00:15:23.426 \longrightarrow 00:15:25.386$ able to say that again in clinical

NOTE Confidence: 0.92529825375

00:15:25.386 --> 00:15:27.378 research of any kind, 100% of anything,

NOTE Confidence: 0.92529825375

 $00{:}15{:}27.378 \dashrightarrow 00{:}15{:}29.380$ but this was a phase two trial

NOTE Confidence: 0.92529825375

 $00:15:29.448 \longrightarrow 00:15:31.356$ and now we're doing phase three.

NOTE Confidence: 0.92529825375

 $00:15:31.360 \longrightarrow 00:15:34.372$ Now what about the loftier weight

NOTE Confidence: 0.92529825375

 $00:15:34.372 \longrightarrow 00:15:36.268$ reduction threshold targets, 10/15/2020?

NOTE Confidence: 0.92529825375

 $00{:}15{:}36.268 \dashrightarrow 00{:}15{:}38.596$ Five well with the highest dose.

NOTE Confidence: 0.92529825375

 $00{:}15{:}38.600 \dashrightarrow 00{:}15{:}41.438$ Many individuals also reach this target.

NOTE Confidence: 0.92529825375

00:15:41.440 --> 00:15:43.950 1/4 of participants lost more

NOTE Confidence: 0.92529825375

 $00:15:43.950 \longrightarrow 00:15:46.212$ than 30% of their body weight,

 $00:15:46.212 \longrightarrow 00:15:48.600$ which is has never been seen before.

NOTE Confidence: 0.92529825375

00:15:48.600 --> 00:15:50.320 And again, this is just in 11 months.

NOTE Confidence: 0.92529825375

 $00:15:50.320 \longrightarrow 00:15:53.236$ This is not the full efficacy of this agent.

NOTE Confidence: 0.92529825375

 $00:15:53.240 \longrightarrow 00:15:54.836$ Now if we look at Reditruitite

NOTE Confidence: 0.92529825375

 $00:15:54.836 \longrightarrow 00:15:56.400$ a little bit more closely,

NOTE Confidence: 0.92529825375

 $00:15:56.400 \longrightarrow 00:15:58.476$ as with any treatment for obesity,

NOTE Confidence: 0.92529825375

00:15:58.480 --> 00:16:00.100 there's great variability in

NOTE Confidence: 0.92529825375

 $00:16:00.100 \longrightarrow 00:16:01.315$ terms of response.

NOTE Confidence: 0.92529825375

00:16:01.320 --> 00:16:03.120 So whether it's bariatric surgery,

NOTE Confidence: 0.92529825375

00:16:03.120 --> 00:16:04.473 medications or anything,

NOTE Confidence: 0.92529825375

 $00:16:04.473 \longrightarrow 00:16:06.277$ you'll have this variability.

NOTE Confidence: 0.92529825375

 $00{:}16{:}06.280 \dashrightarrow 00{:}16{:}07.568$ And if I can draw your attention

NOTE Confidence: 0.92529825375

 $00:16:07.568 \longrightarrow 00:16:08.878$ just to the 8 milligram dose,

NOTE Confidence: 0.92529825375

 $00:16:08.880 \longrightarrow 00:16:11.840$ you can see that some participants lost 10%,

NOTE Confidence: 0.92529825375

00:16:11.840 --> 00:16:14.186 other participants lost more than 45%.

NOTE Confidence: 0.92529825375

 $00:16:14.186 \longrightarrow 00:16:15.994$ And the question is why do we see

 $00:16:15.994 \longrightarrow 00:16:17.792$ this type of variability And we

NOTE Confidence: 0.92529825375

 $00{:}16{:}17.792 \dashrightarrow 00{:}16{:}19.312$ have to understand this better.

NOTE Confidence: 0.92529825375

 $00:16:19.320 \longrightarrow 00:16:22.000$ We genetics is really important to look at.

NOTE Confidence: 0.92529825375

 $00:16:22.000 \longrightarrow 00:16:24.040$ We also look at clinical factors.

NOTE Confidence: 0.92529825375

 $00:16:24.040 \longrightarrow 00:16:26.065$ And one of the things that we saw here

NOTE Confidence: 0.92529825375

 $00:16:26.065 \longrightarrow 00:16:28.280$ was that sex actually made a difference.

NOTE Confidence: 0.92529825375

 $00:16:28.280 \longrightarrow 00:16:32.599$ So women lost more weight than men,

NOTE Confidence: 0.92529825375

 $00:16:32.600 \longrightarrow 00:16:33.716$ 28.5% at 11 months.

NOTE Confidence: 0.92529825375

 $00{:}16{:}33.716 \dashrightarrow 00{:}16{:}36.006$ So even looking at those type of factors

NOTE Confidence: 0.92529825375

 $00{:}16{:}36.006 \dashrightarrow 00{:}16{:}38.238$ and we need to understand why this is,

NOTE Confidence: 0.92529825375

 $00{:}16{:}38.240 \dashrightarrow 00{:}16{:}40.599$ is it the distribution of the adipose,

NOTE Confidence: 0.92529825375

 $00:16:40.600 \longrightarrow 00:16:42.000$ the percent of adipose tissue,

NOTE Confidence: 0.92529825375

00:16:42.000 --> 00:16:44.880 What's different about women and men?

NOTE Confidence: 0.92529825375

 $00:16:44.880 \longrightarrow 00:16:47.436$ And so now we're in phase three and we're

NOTE Confidence: 0.92529825375

00:16:47.436 --> 00:16:49.437 almost fully enrolled here at Yale.

 $00:16:49.440 \longrightarrow 00:16:51.120$ There's oral agents in development.

NOTE Confidence: 0.92529825375

 $00:16:51.120 \longrightarrow 00:16:52.160$ For the sake of time,

NOTE Confidence: 0.92529825375

 $00:16:52.160 \longrightarrow 00:16:53.798$ I'm not going to speak about those.

NOTE Confidence: 0.92529825375

 $00:16:53.800 \longrightarrow 00:16:55.864$ There's also a monthly agent in

NOTE Confidence: 0.92529825375

 $00:16:55.864 \longrightarrow 00:16:57.579$ development in case your patients

NOTE Confidence: 0.92529825375

 $00:16:57.579 \longrightarrow 00:16:59.787$ are not able to take a daily oral

NOTE Confidence: 0.92529825375

 $00:16:59.787 \longrightarrow 00:17:01.358$ or a weekly injectable.

NOTE Confidence: 0.92529825375

 $00:17:01.360 \longrightarrow 00:17:02.956$ And so with all these medications,

NOTE Confidence: 0.92529825375

 $00:17:02.960 \longrightarrow 00:17:05.690$ we know now that we can achieve

NOTE Confidence: 0.92529825375

 $00:17:05.690 \longrightarrow 00:17:07.256$ fifteen 2025% weight reduction,

NOTE Confidence: 0.92529825375

00:17:07.256 --> 00:17:09.216 but we're really moving beyond

NOTE Confidence: 0.92529825375

 $00:17:09.216 \longrightarrow 00:17:10.000$ weight reduction.

NOTE Confidence: 0.92529825375

 $00:17:10.000 \longrightarrow 00:17:11.920$ We're treating obesity and what we

NOTE Confidence: 0.92529825375

 $00:17:11.920 \longrightarrow 00:17:14.878$ want to do is improve health outcomes.

NOTE Confidence: 0.92529825375

00:17:14.880 --> 00:17:16.714 And so when we think about this,

NOTE Confidence: 0.92529825375

 $00:17:16.720 \longrightarrow 00:17:18.688$ we want to optimize health when

 $00:17:18.688 \longrightarrow 00:17:19.672$ we're treating obesity.

NOTE Confidence: 0.92529825375

 $00:17:19.680 \longrightarrow 00:17:20.838$ And in order to do that,

NOTE Confidence: 0.92529825375

 $00:17:20.840 \longrightarrow 00:17:22.970$ we really need to understand the

NOTE Confidence: 0.92529825375

00:17:22.970 --> 00:17:25.744 biology of obesity and how to target

NOTE Confidence: 0.92529825375

 $00:17:25.744 \longrightarrow 00:17:27.879$ that pathophysiology to really maximize

NOTE Confidence: 0.92529825375

 $00:17:27.879 \longrightarrow 00:17:30.478$ those health benefits for our patients.

NOTE Confidence: 0.92529825375

 $00:17:30.480 \longrightarrow 00:17:31.628$ And so with this,

NOTE Confidence: 0.92529825375

 $00:17:31.628 \longrightarrow 00:17:33.792$ I'm going to come back to our

NOTE Confidence: 0.92529825375

00:17:33.792 --> 00:17:35.815 patient and tell you what happened

NOTE Confidence: 0.92529825375

 $00:17:35.815 \longrightarrow 00:17:37.716$ with her after the trial.

NOTE Confidence: 0.92529825375

 $00:17:37.716 \longrightarrow 00:17:39.776$ So as you remember from

NOTE Confidence: 0.92529825375

 $00:17:39.776 \longrightarrow 00:17:41.520$ the beginning of my talk,

NOTE Confidence: 0.92529825375

 $00{:}17{:}41.520 \dashrightarrow 00{:}17{:}43.446$ she had lost over 90 lbs

NOTE Confidence: 0.92529825375

 $00:17:43.446 \longrightarrow 00:17:45.520$ during the course of the trial.

NOTE Confidence: 0.92529825375

 $00:17:45.520 \longrightarrow 00:17:47.542$ Now the trial ended and there's

 $00:17:47.542 \longrightarrow 00:17:48.553$ a safety period.

NOTE Confidence: 0.963391162666667

 $00:17:48.560 \longrightarrow 00:17:51.240$ It's about a month And she came to

NOTE Confidence: 0.963391162666667

 $00:17:51.240 \longrightarrow 00:17:53.986$ see me in clinic at 5 weeks and

NOTE Confidence: 0.963391162666667

 $00:17:53.986 \longrightarrow 00:17:56.408$ at that time she had already began

NOTE Confidence: 0.963391162666667

 $00:17:56.408 \longrightarrow 00:17:58.520$ to rapidly regain that weight.

NOTE Confidence: 0.963391162666667

 $00:17:58.520 \longrightarrow 00:17:59.996$ And So what did we do?

NOTE Confidence: 0.963391162666667

 $00:18:00.000 \longrightarrow 00:18:02.275$ Well, I started her on some Maglatite

NOTE Confidence: 0.963391162666667

00:18:02.275 --> 00:18:05.079 to try and temper that weight regain,

NOTE Confidence: 0.963391162666667

 $00:18:05.080 \longrightarrow 00:18:06.019$ which was successful.

NOTE Confidence: 0.963391162666667

 $00:18:06.019 \longrightarrow 00:18:08.607$ She did slow down in terms of her

NOTE Confidence: 0.963391162666667

 $00{:}18{:}08.607 \dashrightarrow 00{:}18{:}10.917$ weight regain as we escalated the dose.

NOTE Confidence: 0.963391162666667

 $00:18:10.920 \longrightarrow 00:18:12.950$ We then added naltrexone bupropion

NOTE Confidence: 0.963391162666667

 $00:18:12.950 \longrightarrow 00:18:15.719$ to try and bring her back down

NOTE Confidence: 0.963391162666667

 $00{:}18{:}15.720 \dashrightarrow 00{:}18{:}18.276$ to around a BMI of 2425,

NOTE Confidence: 0.963391162666667

00:18:18.276 --> 00:18:20.652 which again we successfully did and

NOTE Confidence: 0.963391162666667

 $00:18:20.652 \longrightarrow 00:18:23.284$ she's done so well with this now,

 $00:18:23.284 \longrightarrow 00:18:26.560$ right now, just as of a few days ago.

NOTE Confidence: 0.963391162666667

 $00:18:26.560 \longrightarrow 00:18:28.756$ Tirzepatide is available to her now.

NOTE Confidence: 0.963391162666667

 $00:18:28.760 \longrightarrow 00:18:30.465$ So we're switching the Samaglatite

NOTE Confidence: 0.963391162666667

 $00:18:30.465 \longrightarrow 00:18:32.504$ for tirzepatite and we'll see if

NOTE Confidence: 0.963391162666667

 $00:18:32.504 \longrightarrow 00:18:34.443$ we'll be able to stop the naltrexone

NOTE Confidence: 0.963391162666667

 $00:18:34.443 \longrightarrow 00:18:36.117$ bupropion as well and switch her

NOTE Confidence: 0.963391162666667

 $00:18:36.117 \longrightarrow 00:18:38.170$ back to what was effective for her.

NOTE Confidence: 0.963391162666667

 $00:18:38.170 \longrightarrow 00:18:40.870$ And what I'd like to highlight

NOTE Confidence: 0.963391162666667

 $00{:}18{:}40.870 \dashrightarrow 00{:}18{:}44.160$ here right now is this is a patient

NOTE Confidence: 0.963391162666667

 $00:18:44.160 \longrightarrow 00:18:45.640$ case on a slide,

NOTE Confidence: 0.963391162666667

 $00:18:45.640 \longrightarrow 00:18:49.320$ but these are our patients and

NOTE Confidence: 0.963391162666667

 $00:18:49.320 \longrightarrow 00:18:52.528$ this patient is here sitting in

NOTE Confidence: 0.963391162666667

00:18:52.528 --> 00:18:54.638 the room with you today.

NOTE Confidence: 0.963391162666667

 $00:18:54.640 \longrightarrow 00:18:57.152$ And she has graciously agreed to stand up

NOTE Confidence: 0.963391162666667

 $00:18:57.152 \longrightarrow 00:18:59.959$ when we give her a big round of applause.

 $00:19:06.770 \longrightarrow 00:19:08.500$ So thank you so much, Lena.

NOTE Confidence: 0.955020304

 $00:19:08.500 \longrightarrow 00:19:11.562$ And I don't hear people were asking

NOTE Confidence: 0.955020304

00:19:11.562 --> 00:19:15.952 me if I was so. So I'm happy.

NOTE Confidence: 0.955020304

00:19:15.952 --> 00:19:18.167 Yes. So thank you so much, Lena.

NOTE Confidence: 0.955020304

 $00:19:18.167 \longrightarrow 00:19:20.463$ And thank you to all of you for

NOTE Confidence: 0.955020304

 $00{:}19{:}20.463 \dashrightarrow 00{:}19{:}22.798$ your attention in this first talk.

NOTE Confidence: 0.955020304

 $00:19:22.800 \longrightarrow 00:19:24.865$ And and we welcome you to check

NOTE Confidence: 0.955020304

00:19:24.865 --> 00:19:26.439 out our website at Y Wait,

NOTE Confidence: 0.955020304

 $00:19:26.440 \longrightarrow 00:19:28.240$ which Lena made for us.

NOTE Confidence: 0.955020304

 $00:19:28.240 \longrightarrow 00:19:29.440$ So thank you so much.

NOTE Confidence: 0.896553686666667

 $00{:}19{:}35.770 \dashrightarrow 00{:}19{:}37.954$ And we have a couple of minutes

NOTE Confidence: 0.896553686666667

 $00:19:37.954 \longrightarrow 00:19:39.616$ for questions before we move on

NOTE Confidence: 0.896553686666667

 $00:19:39.616 \longrightarrow 00:19:41.530$ to to the the stars of our show,

NOTE Confidence: 0.896553686666667

00:19:41.530 --> 00:19:43.570 our speakers. Any questions?

NOTE Confidence: 0.7100763

 $00:19:47.600 \longrightarrow 00:19:48.120$ Oh yes.

NOTE Confidence: 0.592732306

 $00:19:51.480 \longrightarrow 00:19:54.280$ So what is the goal of these seven trees?

00:19:54.280 --> 00:19:56.074 It's like maybe it's a lot of late time,

NOTE Confidence: 0.592732306

00:19:56.080 --> 00:20:03.040 but those like mall or is it going to like?

NOTE Confidence: 0.592732306

 $00:20:03.040 \longrightarrow 00:20:04.200$ Yeah. So that's a really,

NOTE Confidence: 0.592732306

00:20:04.200 --> 00:20:05.935 really great question and we're

NOTE Confidence: 0.592732306

 $00:20:05.935 \longrightarrow 00:20:07.960$ actually trying to figure that out.

NOTE Confidence: 0.592732306

 $00:20:07.960 \longrightarrow 00:20:09.680$ Obesity is a chronic disease.

NOTE Confidence: 0.592732306

 $00:20:09.680 \longrightarrow 00:20:11.312$ So what we believe is that

NOTE Confidence: 0.592732306

 $00{:}20{:}11.312 \dashrightarrow 00{:}20{:}12.400$ chronic treatment is needed.

NOTE Confidence: 0.592732306

 $00{:}20{:}12.400 \dashrightarrow 00{:}20{:}14.236$ Now whether it's with that agent,

NOTE Confidence: 0.592732306

 $00{:}20{:}14.240 \dashrightarrow 00{:}20{:}16.256$ whether it's with a lower dose or a

NOTE Confidence: 0.592732306

00:20:16.256 --> 00:20:17.573 different medication, we don't know.

NOTE Confidence: 0.592732306

 $00:20:17.573 \longrightarrow 00:20:19.199$ As you can see from the,

NOTE Confidence: 0.592732306

00:20:19.200 --> 00:20:21.000 you know, from Lena's case,

NOTE Confidence: 0.592732306

00:20:21.000 --> 00:20:23.366 there is variability and we can add

NOTE Confidence: 0.592732306

 $00:20:23.366 \longrightarrow 00:20:24.999$ in different medications over time,

 $00:20:25.000 \longrightarrow 00:20:25.888$ but we don't know.

NOTE Confidence: 0.592732306

 $00:20:25.888 \longrightarrow 00:20:27.987$ We do think that just as there's variability

NOTE Confidence: 0.592732306

 $00:20:27.987 \longrightarrow 00:20:30.479$ in terms of response to these medications,

NOTE Confidence: 0.592732306

 $00:20:30.480 \longrightarrow 00:20:31.485$ there's also variability

NOTE Confidence: 0.592732306

 $00:20:31.485 \longrightarrow 00:20:33.160$ in terms of weight regain.

NOTE Confidence: 0.592732306

00:20:33.160 --> 00:20:34.640 Some people very quickly gain

NOTE Confidence: 0.592732306

 $00{:}20{:}34.640 \dashrightarrow 00{:}20{:}36.472$ back all the weight and others

NOTE Confidence: 0.592732306

 $00:20:36.472 \longrightarrow 00:20:38.200$ gain back less of the weight.

NOTE Confidence: 0.592732306

 $00:20:38.200 \longrightarrow 00:20:39.160$ But on average,

NOTE Confidence: 0.592732306

 $00:20:39.160 \longrightarrow 00:20:40.760$ most people regain the weight.

NOTE Confidence: 0.592732306

 $00:20:40.760 \longrightarrow 00:20:41.440$ And again,

NOTE Confidence: 0.592732306

 $00:20:41.440 \longrightarrow 00:20:43.480$ it's because we're trying to reset

NOTE Confidence: 0.592732306

 $00:20:43.480 \longrightarrow 00:20:45.558$ a defended fat mass or set point,

NOTE Confidence: 0.592732306

 $00:20:45.560 \longrightarrow 00:20:47.300$ and that's what we're doing when

NOTE Confidence: 0.592732306

 $00:20:47.300 \longrightarrow 00:20:48.755$ we're treating obesity rather than

NOTE Confidence: 0.592732306

 $00:20:48.755 \longrightarrow 00:20:50.237$ treating for weight loss per SE.

 $00:20:50.240 \longrightarrow 00:20:51.750$ That's a byproduct of what

NOTE Confidence: 0.592732306

 $00{:}20{:}51.750 \dashrightarrow 00{:}20{:}52.958$ we're trying to do.

NOTE Confidence: 0.592732306

 $00{:}20{:}52.960 \dashrightarrow 00{:}20{:}54.550$ And I think you're going to

NOTE Confidence: 0.592732306

 $00:20:54.550 \longrightarrow 00:20:56.000$ hear more about that today.
